

Lec 10: Review of Topic 1

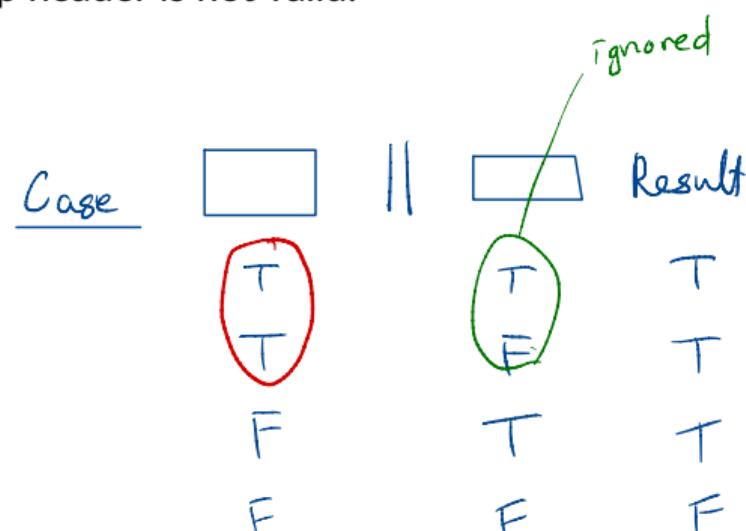

Tips

Loops

#5, HW02

- To kick start a while-loop even when part of loop header is not valid:

~~n = 0;~~ $\text{while } n == 0 \text{ || err} > \text{tol}$ ~~1e-6~~
 not evaluateable.
 $n = n + 1;$
 $q_{\text{approx}} = \dots;$
 $\text{err} = \text{abs}(q - q_{\text{approx}});$
 end

Case

$\boxed{\quad}$ $\&\&$ $\boxed{\quad}$ Result

T	T	T
T	F	F
\boxed{F}	\boxed{T}	\boxed{F}
\boxed{F}	\boxed{F}	F

ignored T

As soon as MATLAB
See that the first is F, it stops.

Forming Sums

To calculate $\sum_{j=1}^n a_j b_j$:

$S =$

- using a loop

```
S = 0;  
for j = 1 : length(a)  
    S = a(j) * b(j);  
end
```

(traditional)

Assume:

$$\vec{a} = (a_1, a_2, \dots, a_n)$$

$$\vec{b} = (b_1, b_2, \dots, b_n)$$

} row vectors stored in MATLAB

- using sum

```
S = sum(a .* b)
```

- inner product

```
S = a * b'
```

$$a : \begin{array}{c|c|c|c|c} 1 & 2 & \dots & n \\ \hline a_1 & a_2 & \dots & a_n \end{array}$$
$$b : \begin{array}{c|c|c|c|c} 1 & 2 & \dots & n \\ \hline b_1 & b_2 & \dots & b_n \end{array}$$
$$a .* b : \begin{array}{c|c|c|c|c} 1 & 2 & \dots & n \\ \hline a_1 b_1 & a_2 b_2 & \dots & a_n b_n \end{array}$$

row column

$$a : \begin{array}{c|c|c|c|c} 1 & 2 & \dots & n \\ \hline a_1 & a_2 & \dots & a_n \end{array}$$
$$b' : \begin{array}{c} b_1 \\ b_2 \\ \vdots \\ b_n \end{array}$$

$\rightarrow a_1 b_1 + a_2 b_2 + \dots + a_n b_n$

"linear algebra"

<inner product>

Sequence of Partial Sums

→ #5, HW02 (Convergence to π)

To study the convergence of an infinite series $S = \sum_{j=0}^{\infty} a_j$, form the sequence of partial sums $\{s_n\}$ where

Assume n is fixed
($\&$ is stored).

$$s_n = \sum_{j=0}^n a_j = a_0 + a_1 + \cdots + a_n.$$

Assume $(a_0, a_1, a_2, \dots, a_n)$ stored.

- using a loop

```
for k = 0 : n
    s_k = 0
    for j = 0 : k
        s_k = s_k + a(j);
    end
    disp (s_k)
end
```

s_0
 s_1
 s_2
⋮
 s_n

- using cumsum

$S = \text{cumsum}(a)$

$$a : \begin{array}{|c|c|c|c|c|} \hline 1 & 2 & \cdots & n+1 \\ \hline a_0 & a_1 & \cdots & | a_n \\ \hline \end{array}$$

$\text{cumsum}(a) : \begin{array}{|c|c|c|c|c|} \hline s_0 & s_1 & s_2 & \cdots & s_n \\ \hline \end{array}$

$a_0 \quad \uparrow \quad a_0 + a_1 \quad \uparrow \quad a_0 + a_1 + a_2 \quad \uparrow \quad \sum_{j=0}^n a_j$

Simple Examples

Biased Coin

Question

Simulate the tossing of a biased coin with

$$0 \leq p \leq 1$$

$$P(T) = p, \quad P(H) = 1 - p = q$$

Randomly generate

$$p = \frac{3}{4}, \quad q = \frac{1}{4}$$

toss = randi([0 3]);

if toss < 3

toss = 0;

else

toss = 1;

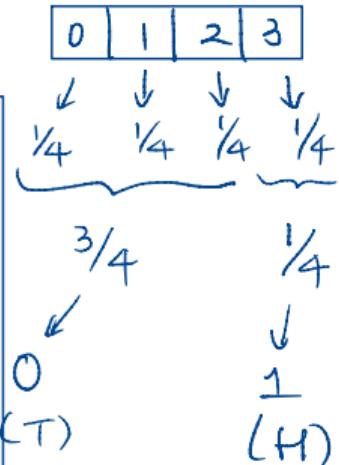

end

$$p = p(T) = 3p(H)$$

$$\Rightarrow p(H) = \frac{1}{3}p$$

$$\therefore p(T) + p(H) = p + \frac{1}{3}p = \frac{4}{3}p = 1$$

$$\Rightarrow p = \frac{3}{4}, \quad q = \frac{1}{4}$$

Biased Coin - Notes

Ideas.

- random number generators
- traditional tools: loops and conditional statements
- the *powerful* find function
- one-liner using ceil or floor

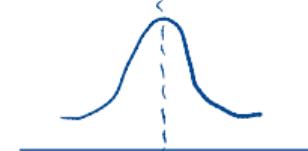

Read my Schr.

Explore.

- How would you handle similar situations with multiple states with non-uniform probability profile, e.g., a biased dice?

rand
randi } uniform.

Normal/Gaussian Distro.

Dice Rolls

Birthday Problem

Question

Write a script simulating $n = 10,000$ throws of two 6-sided fair dice. What is the probability of obtaining two same numbers? Provide both analytical and numerical answers.

- $\text{randi}([\underbrace{1 \dots 6}_\text{b-Sided}, \underbrace{2}_\text{two dice}, \underbrace{1e4}_\text{\# of throws}]$)
 - diff : difference along columns
 - find : detect when the diff = 0
- b-Sided two dice # of throws
Sum1 Sum2 ... Sum 10,000
- ↓ ↓ ↓ ↓
- results →
→ | 1 | 2 | 4 | ... | 5 | 6 |
→ | 5 | 3 | 4 | ... | 6 | 6 |

Finding Factors

Question

Given a positive integer \underline{n} , finds all factors. Do it using a single MATLAB statement.

- If $n=12$,
- "mod" is going to be useful.

$$g(12) = 6 \quad [1, 2, 3, 4, 6, 12]$$

- p is a factor of n if $\left. \begin{array}{l} n = pk, \\ k \in \mathbb{N}. \end{array} \right\}$
- "find" function

Ans. $\boxed{\text{find}(\text{mod}(n, 1:n) == 0)}$

Finding Factors – Notes

Ideas.

- the mod function: detecting a factor
- the find function: do it in one scoop

$\left\{ \begin{array}{l} \text{mod}(4, 2) : \text{remainder of } 4 \div 2 \text{ (0)} \\ \text{mod}(4, 3) : \dots \quad \dots \quad 4 \div 3 \text{ (1)} \end{array} \right.$

a factor of 4

not a factor of 4

w/o using
a loop.

Explore.

- The built-in function `factor` finds all prime factors. Use it to write a prime factorization of an integer.

Data Manipulation

Download `grades.dat` into your current directory and load it using

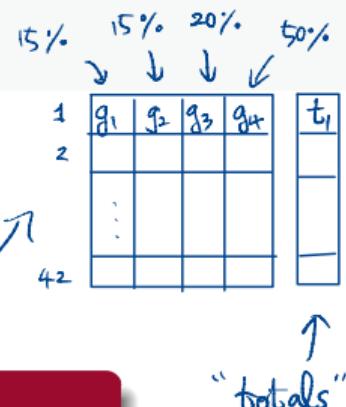

```
>> grades = load('grades.dat');
```

To read about how the data are organized, use type grades.dat.

Question

- ① Determine the number of students.
 - ② Compute the total grade according to the weights specified in the header.
Do this without using a loop.
 - ③ The letter grades are determined by
 - A: [90, 100]
 - B: [80, 90)
 - C: [70, 80)
 - D: [60, 70)
 - E: [0, 60)

Find the number of students earning each of the letter grades.

$$t_1 = 0.15 g_1 + 0.15 g_2 + 0.2 g_3 + 0.5 g_4$$

"Weighted average"

$$\begin{array}{c}
 G \\
 \downarrow j^{th} \\
 \begin{array}{|c|c|c|c|} \hline & & & \\ \hline g_{j,1} & g_{j,2} & g_{j,3} & g_{j,4} \\ \hline & & & \\ \hline \end{array}
 \end{array}
 \times
 \begin{array}{c}
 W \\
 \begin{array}{|c|c|c|c|} \hline w_1 \\ \hline w_2 \\ \hline w_3 \\ \hline w_4 \\ \hline \end{array}
 \end{array}
 =
 \begin{array}{c}
 \begin{array}{|c|c|} \hline & \\ \hline \sum_{k=1}^4 g_{jk} w_k \\ \hline & \\ \hline \end{array}
 \leftarrow j^{th} \\
 \begin{array}{|c|} \hline \\ \hline \end{array}
 \end{array}
 \begin{array}{c}
 42 \times 4 \\
 4 \times 1 \\
 42 \times 1
 \end{array}$$

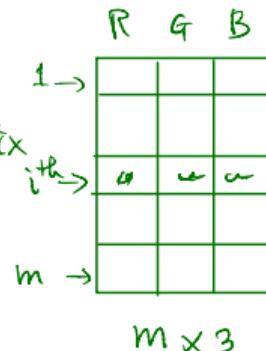

Spiral Triangle: Tying Up Loose Ends

Recall: Entire Code

jet, parula, winter, ..., hot, pink, ...
(default)

```
1 m = 21; d_angle = 4.5;
2 th = linspace(0, 360, 4) + 90;
3 V = [cosd(th);
       sind(th)];
4 C = colormap hsv(m);
5 s = sind(150 - abs(d_angle))/sind(30); ←
6 R = [cosd(d_angle) -sind(d_angle);
       sind(d_angle) cosd(d_angle)];
7 hold off
8 for i = 1:m
9     if i > 1
10        V = s*R*V;
11    end
12    plot(V(1,:), V(2,:), 'Color', C(i,:))
13    hold on
14 end
15 set(gcf, 'Color', 'w') → background.
16 axis equal, axis off
```

to take into account
both clockwise & counterclockwise rotation.

Understanding Line 6

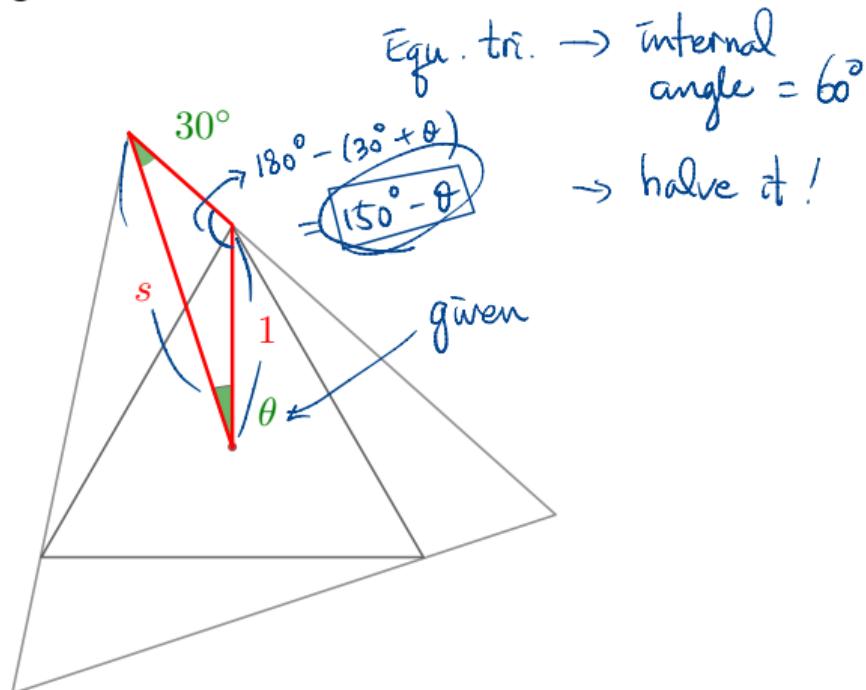

To create the desired spiraling effect, the scaling factor must be calculated carefully.

- Useful: Law of Sine

$$\frac{\sin \alpha}{a} = \frac{\sin \beta}{b} = \frac{\sin \gamma}{c}$$

- Compute the scaling factor s :

$$\frac{\sin 30^\circ}{1} = \frac{\sin(150^\circ - \theta)}{s}$$

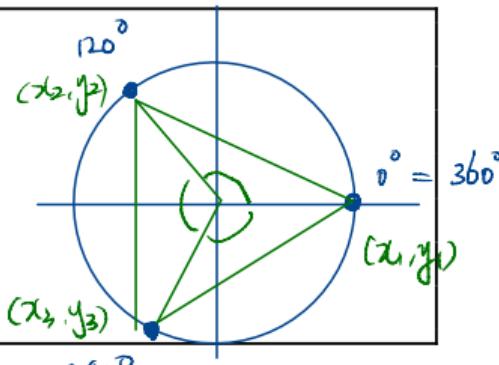

Understanding Line 12

0, 120, 240, 360

```

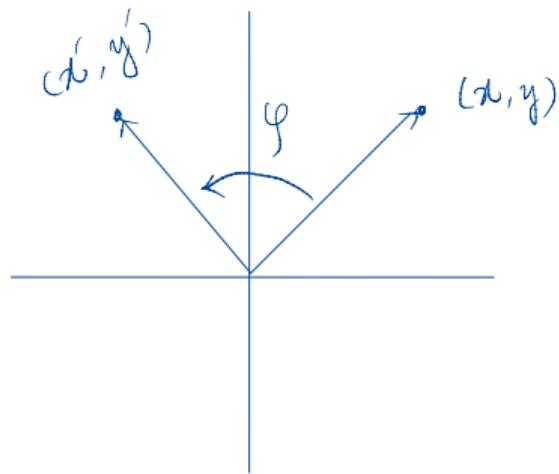

th = linspace(0, 360, 4) + 90;
V = [cosd(th);
      sind(th)];
s = sind(150 - abs(d_angle))/sind(30);
R = [cosd(d_angle) -sind(d_angle);
      sind(d_angle) cosd(d_angle)];
V = s*R*V; %% <----

```

$$\begin{cases} x_1 = \cos(0^\circ) \\ y_1 = \sin(0^\circ) \end{cases}$$

2-D rotation

$$R_{xy} = \begin{bmatrix} \cos \varphi & -\sin \varphi \\ \sin \varphi & \cos \varphi \end{bmatrix}$$

(Angle of rotation)

$$\begin{bmatrix} x' \\ y' \end{bmatrix} = R_{xy} \begin{bmatrix} x \\ y \end{bmatrix}$$
$$= \begin{bmatrix} \cos \varphi & -\sin \varphi \\ \sin \varphi & \cos \varphi \end{bmatrix} \begin{bmatrix} x \\ y \end{bmatrix}$$
$$= \begin{bmatrix} x \cos \varphi - y \sin \varphi \\ x \sin \varphi + y \cos \varphi \end{bmatrix}$$

$$R \vec{V} = R \begin{bmatrix} \vec{v}_1 \\ \vec{v}_2 \\ \vec{v}_3 \\ \vec{v}_4 \end{bmatrix} \quad \text{"new object"}$$

$\begin{matrix} \uparrow & \uparrow \\ 2 \times 2 & 2 \times 4 \end{matrix}$

$$= \begin{bmatrix} R\vec{v}_1 & R\vec{v}_2 & R\vec{v}_3 & R\vec{v}_4 \end{bmatrix} \quad 2 \times 4$$

$\downarrow \quad \downarrow \quad \downarrow \quad \downarrow$
 $2 \times 1 \quad 2 \times 1 \quad 2 \times 1 \quad 2 \times 1$

rotated coord.

of 1st vertex 2nd 3rd 4th

Understanding Line 5 (More on Coloring)

- Using RGB colors in plots
- colormap

Simple

```
plot(x, y, 'r')
```

g

b

m

c

w

k

y

Alternate (ed rever
RGB)

	R	G	B
Red :	1	0	0
Green:	0	1	0
Blue :	0	0	1.
			:

```
plot(x, y, 'color', [0.6, 0.6, 0.6])
```
